

Akamai Lockers, a locally owned and operated Hawaii Corporation delivers and maintains a smart locker system that provides a secure and convenient way for residents to receive and return packages at any time. Also integrates with retail store BOPIS systems. Our lockers provide:

- Customer Convenience
- Process Optimization
- Labor Savings

The systems are integrated with a cloud-based software platform that allows users to track, manage, and access their packages through a mobile app or a touchscreen kiosk. Akamai Lockers also offers a range of features such as custom branding, modular design, and remote support.

### Indoor Parcel Lockers

#### Feature-Rich Solution

The Premier Locker Series has been the architect and designer's choice since 2012, offering a built-in furniture appearance and plenty of features; meaning it not only looks good but is easy-to-use, as well!

### Outdoor Smart Lockers

#### No interior space? No problem!

Designed to thrive in all types of outdoor environments, the Element Locker Series is fully configurable in either the factory or the field to ensure you get exactly what is needed!

### Package Room

#### Access-controlled

With the same user-friendly software as our automated lockers, the smart Package Room system has multi-package deposit enhancements for even faster carrier delivery and resident convenience.

### Standalone Lockers

#### For Smaller Needs

The modular design of the Express Locker Series makes it the perfect system for standalone solutions, or it can be grouped with other modules to expand into a larger solution.
